

## Air Pollution Card

### Amri India Private Limited

Poor

#### Industry Description

MPCB Regional Office (RO)	: Aurangabad
Sub-Regional Office (SRO)	: Aurangabad I
Type	: Red
Scale	: Large
Sector	: Pharmaceuticals

#### Address

G-11, Waluj MIDC,  
Aurangabad, Maharashtra

#### What does the rating mean?

Better Performing plants (i.e. plants with lower particulate matter (PM) concentration in stack emissions) get more stars. A 4-star or 5-star rating implies that most of the recent stack samples of the plant report PM emissions below a standard of 150mg/Nm<sup>3</sup>. A plant's star rating also benchmarks its relative performance: as of ratings date, 38 percent of rated plants have done better (received 4 or 5 stars) and 43 percent of rated plants have done worse (received 1 or 2 stars).

#### Star Rating Key

Very Poor	Poor	Moderate	Good	Very Good
				

#### About the Star Rating Program

**Maharashtra Pollution Control Board (MPCB)** has initiated an air pollution information disclosure program to give industries star ratings on the basis of their particulate matter (PM) emissions. These ratings are shared through **Air Pollution Report Cards**. Ratings represent the **air pollution performance** of industries, as measured by their **PM emission concentrations**.

Ratings are based on data obtained from routine stack sampling for PM as supervised by MPCB. Industries are rated according to the median PM emissions concentration of their latest 4 sample.
